We are here!

What is CT RDA BAM ORD ?

Corporate Technology

Research in Digitalization and Automation

Business Analytics and Monitoring

Operations Research for Decision Support

Our mission & our technologies

Mission

Design and development of **custom-tailored** planning **algorithms** and software **tools**.

Direct value creation for our company-internal customers and their end-customers.

Technologies

Mathematics

- (Non-)Linear & Mixed Integer Programming
- Graph Theory
- Discrete, Combinatorial & Stochastic Optimization

Software development competence

Domain expert's world

Goals, rules, solution ideas as understood and presented by the domain expert.

Business domain

Capturing the business rules in a well-defined and precise way.

Modeling

Business rules as formulas.

Solving the problem

Requirements engineering

Formulate as
mathematical model

Feed the model and the data
to the solver algorithm

Find the optimal
solution

Interpret the mathematical solution
In terms of the domain

Does the domain expert accept
the solution?

Domain expert's world

Goals, rules, solution ideas as understood and presented by the domain expert.

Business domain

Capturing the business rules in a well-defined and precise way.

Modeling

Business rules as formulas.

Solving the problem

Requirements engineering

formulate as mathematical model

get & visualize solution in terms of the domain

Does the domain expert accept the solution?

AutoLP is a SW-development environment for c++, c##, fully embedded in Visual Studio, supporting the development of mathematical models using business-objects.

AutoLP offers the integration of all relevant MILP solvers.

MOaaS allows for describing mathematical optimization models, testing the performance of these models for various solver libraries, and demonstrating results on modifiable dashboards, interactively in a web-based UI.

MOaaS can be used without SW-development skills, thus provides a low threshold method to start with modelling.

SCIP is currently one of the fastest non commercial solvers for mixed integer programming (MIP) and mixed integer nonlinear programming (MINLP).

Domain expert's world

Goals, rules, solution ideas as understood and presented by the domain expert.

Business domain

Capturing the business rules in a well-defined and precise way.

Modeling

Business rules as formulas.

Solving the problem

To build a mathematical model you need the joint work of experts knowing about their application and modeling experts.

A good tool chain is the base to do this efficiently

Data is needed to do experiments and to check the model, data is not used to learn or extract the model !

Optimization as engineering support function

1992 – 1994 Chip Design

1993 – 1997 Phone Networks

1996 – 2004 Mobile Phone Networks

2009 – 2012 Layout of PV-Plants

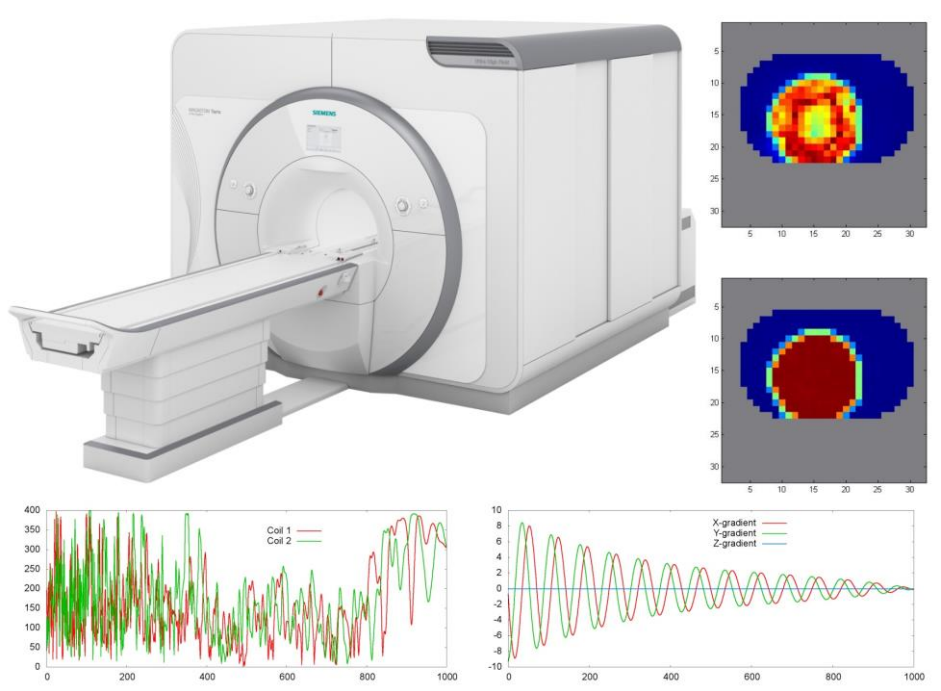

2015 -2016 Truck Layout

2015 – 2020 Power Grids

Optimizing the performance of machines

Improving the operation in the shop floor

SIEMENS
Ingenuity for life

Questions?

Join the session on the 25th September at 10:00 or 21:00 (CET)

Applying optimization in real world
applications can be fun - even in industry
